Data availability & provenance

Dataset	Public?	Location / licence	File in archive
[fill later]	yes	DOI / URL	…
… (add rows)			
Folha de S.Paulo news scrape	see note	Public web, © Folha S.Paulo	produced by code

> **Note.** Folha articles are scraped on-the-fly; raw HTML is **not redistributed**. Derived variables are included under fair-use.

A single bundle of raw inputs is archived on Dataverse:

- DOIhttps://doi.org/10.7910/DVN/M97OCJ
- File`raw_data_20250708.zip` (~1gb)
- SHA-256`ADD-HASH-HERE`

Computational requirements

Software

- **R 4.4.2** (2024-10-31) or later
- All R packages pinned in `renv.lock` – restore with:

```r
install.packages("renv")
renv::restore()
```

- External tools: `git`, `zip/unzip`, C/C++ build tools.

Hardware & runtime

Pipeline tested on a MacBook Pro (M1,36GB RAM); `targets::tar_make()` completes in **<3h**, peak RAM <16GB.

3 Quick-start

```r
# clone repository ----------------------------------------------------------
# git clone https://github.com/<user>/red_trade.git
# cd red_trade

install.packages("renv")   # once
renv::restore()             # recreate package environment

library(targets)
tar_make()                  # run full pipeline
```

Outputs (tables, figures) will be written to `output/`.

Folder overview *(draft)*

```

|-- _targets.R           # pipeline
|-- R/                   # functions
|-- raw_data_20250708.zip
|-- renv.lock            # package versions
|-- README.Rmd           # this file
```

Variable definitoions (codebook)

Variable	Description	Source
`iso3c`	Three-letter country code (ISO-3166-1)	Dynamic Gravity Dataset, USITC
`year`	Calendar year	UNGA ideal-point dataset
`pop`	Population (millions)	Dynamic Gravity Dataset, USITC
`abs_distance_china`	Absolute distance to China in UNGA ideal-point space	UNGA ideal-point dataset
`gdp_cur`	GDP, current USD	Dynamic Gravity Dataset, USITC
`abs_distance_usa`	Absolute distance to the U.S. in UNGA ideal-point space	UNGA ideal-point dataset
`gpi`	Global Power Index	Diplometric — Pardee Institute
`us_power_gap`	U.S. GPI minus country GPI	Computed from GPI
`us_ideal`	U.S. ideal-point estimate	UNGA ideal-point dataset
`trade_with_china`	Goods trade with China (USD)	Dynamic Gravity Dataset, USITC
`trade_with_us`	Goods trade with United States (USD)	Dynamic Gravity Dataset, USITC

Variable	Description	Source
`total_trade`	Total goods trade (USD)	Dynamic Gravity Dataset, USITC
`distance_us`	Distance capital → Washington DC (km)	CEPII GeoDist via DG
`distance_china`	Distance capital → Beijing (km)	CEPII GeoDist via DG
`exchange_rate`	Market exchange rate (LCU per USD, annual avg.)	World Bank WDI (PA.NUS.FCRF)
`latin_america`	1 = Latin America & Caribbean, 0 otherwise	Author coding (UN regions)
`pci_cur`	GDP per capita, current USD	Dynamic Gravity Dataset, USITC
`perc_trade_with_china`	Trade with China ÷ total trade	Author calculation
`perc_trade_with_us`	Trade with U.S. ÷ total trade	Author calculation
